SUMMARY

Full-stack engineer shipping production web apps end to end — **React/Next.js** frontends, **Node.js/FastAPI** backends, and **PostgreSQL** data layers. Built a multi-tenant SaaS platform with RBAC and i18n, cut API latency **40%** through caching and profiling, and automated deployment via Docker/CI-CD, cutting release time **60%**. **2 patents filed**, ML research at **IIT Roorkee**, **10+ hackathon wins**.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, Python, SQL, C++
Frontend	React, Next.js, Tailwind CSS, React Query, responsive UI
Backend & APIs	Node.js, FastAPI, Hono, distributed microservices, REST APIs, WebSockets, JWT / RBAC auth
DevOps & Cloud	Docker, GitHub Actions (CI/CD), AWS, GCP, Vercel, Git
AI Integration	LLM APIs (OpenAI, Groq), RAG, vector search (FAISS)

EDUCATION

College of Engineering Roorkee (COER) — B.Tech, Information Technology *Expected May 2026 / CGPA: 7.8 / 10*
Coursework: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, Machine Learning

EXPERIENCE

Full Stack Developer | AgroLogi Technologies *Sep 2025 – Feb 2026 / Remote*

- Built a multi-tenant Next.js application (RBAC, i18n, 3 markets) and cut API response times by **40%** through profiling and targeted Redis caching on critical routes.
- Designed and shipped backend services in FastAPI, including an ML inference endpoint that reduced detection latency by **35%** and improved accuracy by **25%**.
- Containerised all services with Docker and automated CI/CD via GitHub Actions (Vercel + Render), cutting deployment time by **60%**.
- Containerised all services with Docker and automated CI/CD via GitHub Actions across a multi-service architecture (Vercel + Render), cutting deployment time by **60%**.
- Built a document-QA feature (FAISS retrieval + GPT-4) reaching **89%** accuracy on a 200-question evaluation set.

Research Intern | Indian Institute of Technology (IIT) Roorkee *Apr 2025 – Aug 2025 / Roorkee*

- Replaced static validator selection in a blockchain consensus protocol with a gradient-boosted ML model, improving throughput by **30%** and reducing block-confirmation latency by **20%** on a 20-node testnet.

PROJECTS

AI Customer Support System | Hono, React, PostgreSQL, Prisma, Turborepo [🔗 Code](#)

- Built a Turborepo monorepo (Hono API + React/Vite frontend) with PostgreSQL/Prisma persistence, real-time streamed responses, and full conversation history; routes inbound messages to specialised support, orders, and billing modules.

ComponentForge | Python, Next.js, Vercel, Groq [🌐 Live](#) [🔗 Code](#)

- Built a Next.js tool that generates Angular components in under **5 s**, enforcing design-system tokens through a 7-rule static linter and sanitising inputs to block injection attacks.

ACHIEVEMENTS

- Patents Filed (2):** *Green Nest* — AI-driven smart agriculture system (crop health, soil analytics); AI-powered IoT smart dustbin (waste segregation & real-time alerting).
- Google Gemini Campus Ambassador** — selected in the top **0.003%** of 30,000+ applicants.
- Winner** — Hack The Future 2.0 (Tula's Institute, Sep 2025); **2nd** — AlgoVerse (Microsoft · HackWithIndia-IGDTUW, Jul 2025); **2nd** — INNOWAVE (IIT Roorkee, Mar 2025).
- 250+ LeetCode** problems solved across Arrays, Trees, Graphs, DP, and Sliding Window.
